

How to input a true nagra2 Key

Obs: This is to use when Autoroll failed for some reason and you want to input manually the key

Let's suppose that we want to input the key 01 from provider

D*****I + (4101): 11 22 33 44 55 66 77 88 99 AA 00 11 22 33 44 55

- 1) Go to **Menu** than press **blue button** to access to hide Menu
- 2) Go to Nagravision than select the id of key that you want to input in this case we will input the Key 01 of D+, we put it like this:
00 40 01 01 11 22 33 44 55 66 77 88
00 40 01 11 99 AA 00 11 22 33 44 55
- 3) After this press **save** to save both key
- 4) Than press **Red button** this will change the keys at OSD to the Azbox format
- 5) And it's all, anyway we don't want that you need to do it several times :P
